### 3.1 – Customer Journey Map

A Customer Journey Map is a strategic visualization tool that represents the complete experience of users while interacting with a system or product. It helps in understanding user behavior, expectations, emotions, and touchpoints across different stages of interaction. The main objective of a customer journey map is to identify how users engage with a system from initial awareness to final decision-making and post- usage evaluation.

In the context of the project "iRevolution: A Data-Driven Exploration of Apple's iPhone Impact in India Using Tableau", the customer journey map focuses on how different stakeholders such as data analysts, business users, marketing teams, and decision-makers interact with the Tableau-based analytical system to gain insights about Apple's iPhone market performance in India.

This journey map ensures that the system is designed in a user-centric manner, enabling users to efficiently explore data, derive insights, and support strategic decisions.

**Stages of the Customer Journey**

The customer journey in this project can be divided into the following key stages:

1. Awareness
2. Data Collection
3. Data Preparation
4. Data Exploration
5. Insight Generation

Each stage represents a critical phase in the user's interaction with the system.

**1. Awareness Stage**

At this stage, users become aware of the need for a data-driven system to analyze Apple's iPhone impact in India. They realize that traditional reports and spreadsheets are not sufficient to understand complex market dynamics.

**User Goals:**

- Understand Apple's position in the Indian smartphone market
- Identify the potential of Tableau for business insights

**User Emotions:**

- Curiosity about market trends
- Interest in data visualization

**2. Data Collection Stage**

In this stage, users gather relevant datasets from open sources such as Kaggle, online market research portals, and public reports.

**User Goals:**

- Obtain reliable and relevant datasets
- Ensure data covers multiple analytical dimensions

**User Emotions:**

- Optimism about data availability
- Concern about data quality

**3. Data Preparation Stage**

Here, users clean, transform, and organize the data before uploading it into Tableau. This includes handling missing values, removing duplicates, standardizing formats, and creating calculated fields.

**User Goals:**

- Prepare high-quality data for analysis
- Ensure consistency across variables

**User Emotions:**

- Focus and attention to detail
- Slight frustration with messy data

**4. Data Exploration Stage**

At this stage, users begin interacting with Tableau dashboards. They apply filters, explore different charts, and drill down into specific categories such as region, year, or model type.

**User Goals:**

- Discover patterns and trends
- Compare different variables

**User Emotions:**

- Engagement and interest
- Excitement when insights emerge
-

**5. Insight Generation Stage**

Users start interpreting visual patterns and derive meaningful business insights. For example, identifying which regions show higher iPhone adoption or which models are more popular in India.

**User Goals:**

- Convert visual data into insights
- Identify strategic opportunities

**User Emotions:**

- Achievement and clarity
- Analytical satisfaction

**6. Decision Mafiing Stage**

Insights are used for strategic decision-making. Users may present dashboards to management or use them for academic evaluation, marketing strategies, or business planning.

**User Goals:**

- Support decisions with data
- Improve business strategies

**User Emotions:**

- Confidence and authority
- Reduced uncertainty
