MAXIMUM MARKS	4 MARKS

3.2 – Solution Requirements

Solution requirements define the essential features, capabilities, and constraints that the proposed system must satisfy in order to achieve the project objectives.

In the project "iRevolution: A Data-Driven Exploration of Apple's iPhone Impact in India Using Tableau", the solution requirements focus on building a robust, user- friendly, and interactive data visualization system that enables stakeholders to analyze Apple's iPhone market performance in India.

Functional Requirements

Functional requirements describe what the system should do.

1.Data Integration

The system should be able to import datasets from multiple sources such as CSV, Excel, and online repositories. It must support structured data related to sales, market share, pricing, regions, and time periods.

2.Data Preprocessing

The system should provide mechanisms for:

- Cleaning missing or inconsistent data
- Removing duplicates
- Formatting data types
- Creating calculated fields

3.Data Exploration

Users should be able to:

- Explore data across multiple dimensions
- Compare regions, years, and models
- Identify patterns and correlations

4.Reporting and Exporting

The system should support:

- Exporting dashboards as PDF or images
- Sharing reports with stakeholders
- Embedding dashboards in presentations

5.Storytelling

The system should provide a storytelling feature using Tableau Stories to present insights in a narrative flow.

Non-Functional Requirements

Non-functional requirements define how the system performs.

1· Usability

The system should be easy to use for both technical and non-technical users. The interface must be intuitive, with clear navigation and minimal learning curve.

2·Performance

The system should process large datasets efficiently and generate visualizations without significant delay.

3·Maintainability

The system should be easy to update and maintain, allowing users to refresh data and modify dashboards.

User Requirements

The system should satisfy the needs of different user groups:

Data Analysts

- Need advanced filtering and calculations
- Require detailed insights and trends

Business Managers

- Need high-level KPIs and summaries
- Prefer simple and clear dashboards

Marketing Teams

- Need customer behavior insights
- Require regional and product-based analysis

Constraints and Assumptions

Constraints

- Availability of public datasets only
- No access to official Apple internal data
- Limited real-time data

Assumptions

- Data sources are reliable
- Users have basic knowledge of Tableau

Internet connectivity is available
