PROJECT NAME	iRevolution: A Data-Driven Exploration of Apple's iPhone Impact in India Using Tableau
MAXIMUM MARKS	4 MARKS

4.2 – Proposed Solution

The proposed solution aims to design and implement a comprehensive, interactive, and user-centric data visualization system that effectively analyzes and presents the impact of Apple's iPhone in the Indian market. The solution is built using Tableau as the primary Business Intelligence (BI) tool to transform raw and complex datasets into meaningful visual insights.

The core objective of the proposed solution is to enable stakeholders to understand market trends, customer behavior, and business performance through dynamic dashboards and visual storytelling, thereby supporting data-driven decision-making.

Architecture of the Proposed Solution

The proposed solution follows a layered architecture consisting of the following components:

1. Data Source Layer

This layer includes publicly available datasets collected from:

- Kaggle
- Market research portals
- Online smartphone industry reports
- CSV and Excel files

These datasets contain information related to:

- iPhone sales
- Market share
- Pricing
- Regions and states

2. Data Processing Layer

In this layer, raw data is cleaned and prepared for analysis using tools such as:

- Microsoft Excel
- (Optional) Python for preprocessing

Key operations include:

- Handling missing values
- Removing duplicates

This ensures data accuracy, consistency, and reliability.

3. Analytical Layer (Core Layer)

This is the heart of the proposed solution, implemented using Tableau. Key

functionalities:

- Connecting multiple datasets
- Creating calculated fields
- Performing trend and comparative analysis

4. Visualization Layer

This layer focuses on presenting insights in a graphical format. Visual

elements include:

- Line charts for growth trends
- Bar charts for brand and model comparison
- Pie charts for market share

Functional Capabilities of the Proposed Solution

The proposed system provides the following capabilities:

- Importing and integrating multiple datasets
- Cleaning and preprocessing data
- Interactive dashboard creation
- Real-time filtering and drill-down analysis
