PROJECT NAME	iRevolution: A Data-Driven Exploration of Apple's iPhone Impact in India Using Tableau
MAXIMUM MARKS	4 MARKS

6.5 - Story:

In Tableau, a *Story* is a sequence of visualisations arranged in a logical order to present a clear data narrative. It combines multiple dashboards or worksheets to communicate insights step-by-step, enabling users to understand trends, patterns, and conclusions in a structured manner. Unlike standalone dashboards, a story guides the viewer through the analytical journey from problem statement to final insights.

1. Concept of Data Storytelling

Data storytelling refers to the process of communicating data insights using a combination of visualisations, context, and narrative explanation. It integrates:

- **Data** (facts and figures)
- **Visuals** (charts, graphs, dashboards)
- **Narrative** (interpretation and explanation)

The theoretical foundation of data storytelling lies in communication theory, which emphasises clarity, logical flow, and audience engagement. A well-designed story ensures that insights are not only displayed but also understood.

Data Storytelling is the practice of communicating insights derived from data through a structured narrative supported by visualisations and contextual explanation. It combines analytical findings with visual representation and interpretative commentary to make complex information understandable and meaningful to the audience.

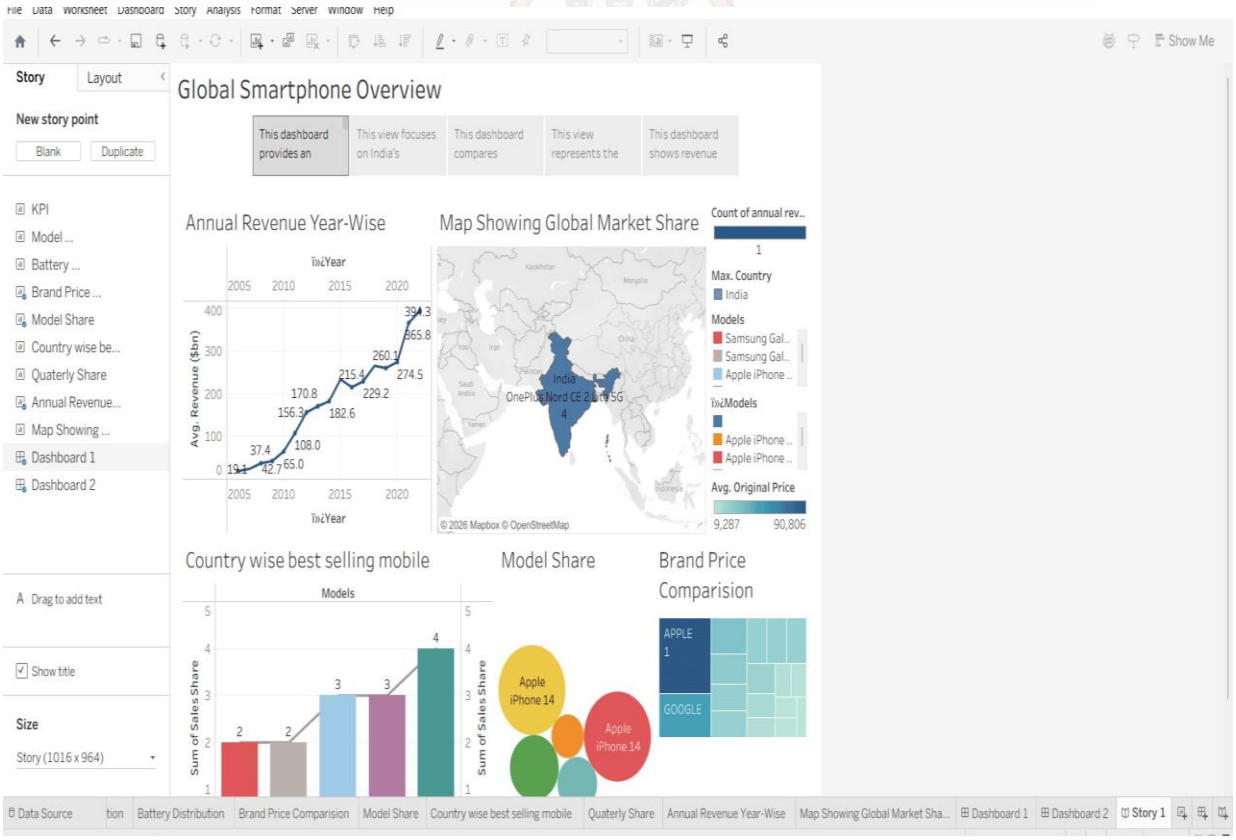
2. Structure of the Tableau Story

The Story in this project was organized into multiple story points, each focusing on a specific analytical aspect:

Story Point 1: Introduction to iPhone Marfiet in India

- Overview of Apple's entry and growth
- Summary of dataset used
- Key performance indicators (Total Sales, Revenue)

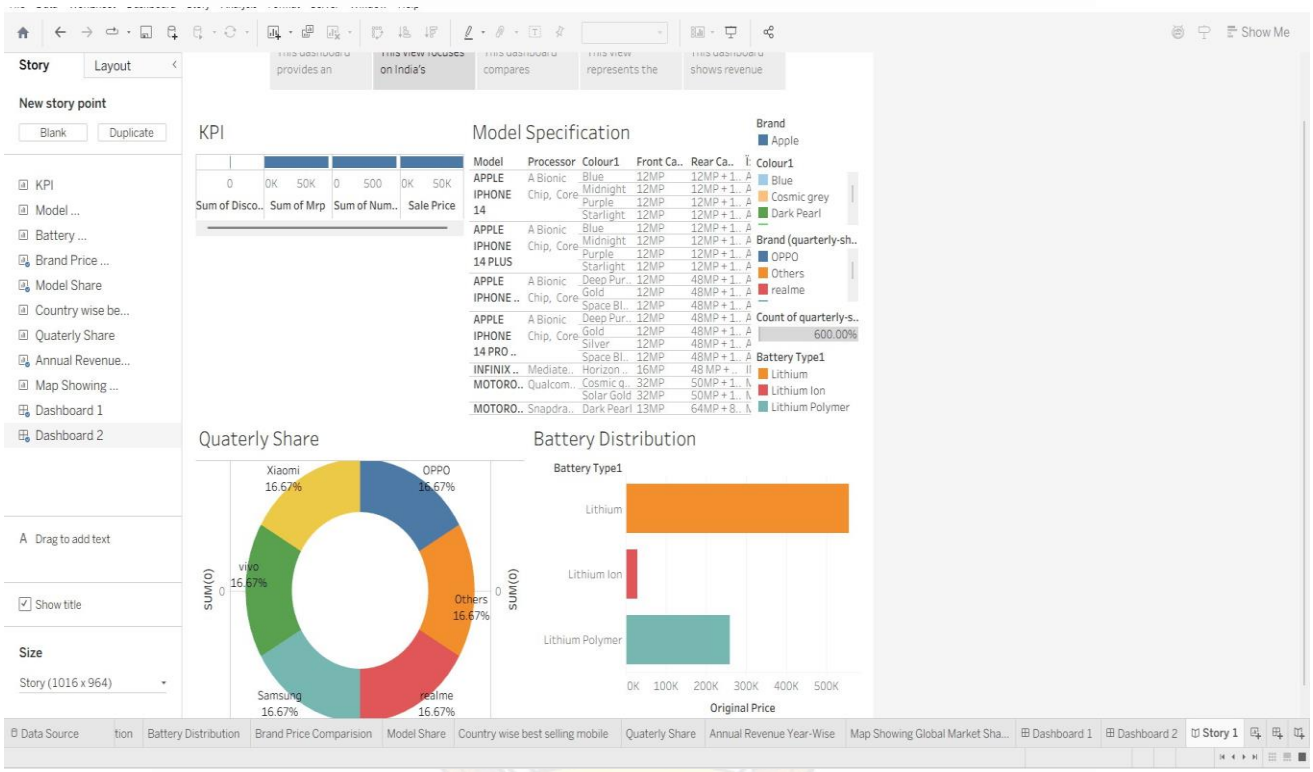
Screen:



Story Point 2: Year-wise Sales Growth

- Trend analysis of units sold
- Identification of growth phases
- Impact of product launches on sales

Screen:



Concept of Sales Growth

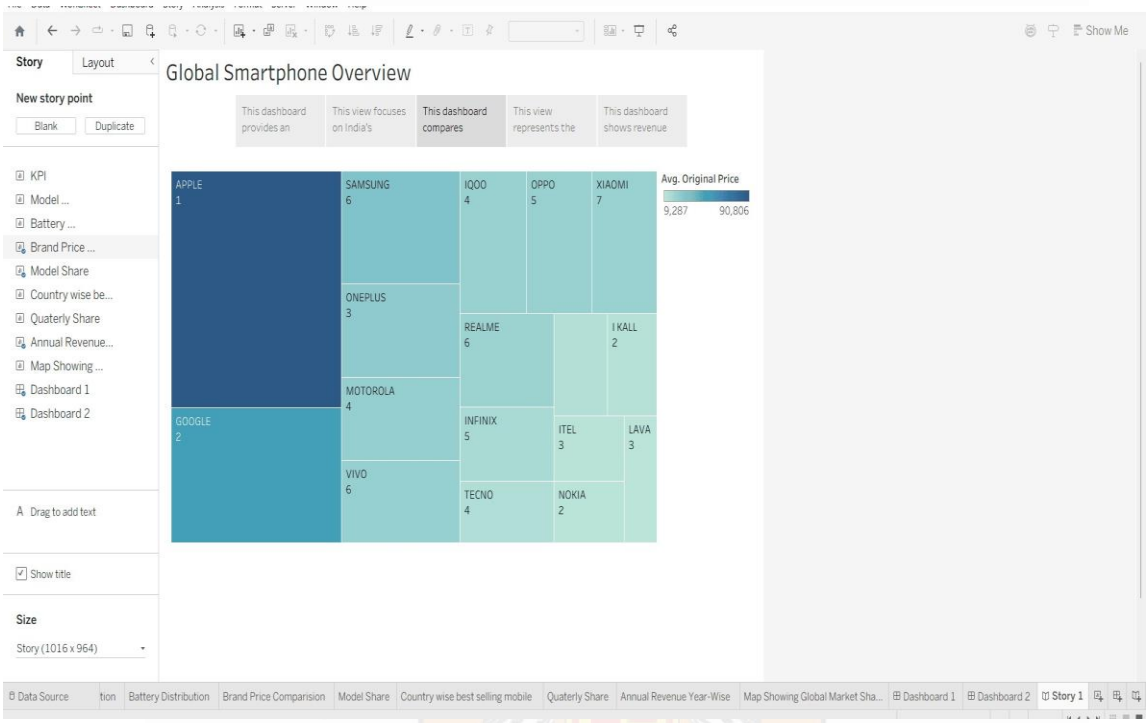
Sales growth refers to the increase (or decrease) in sales revenue over a specific period compared to a previous period.

- Business expansion
- Market demand changes

Story Point 3: Revenue and Pricing Analysis

- Revenue comparison across years
- Relationship between price and demand
- Contribution of premium models

Screen:



Revenue and Pricing Analysis examines how pricing strategies influence a company's revenue performance and overall profitability. It evaluates the relationship between price, sales volume, customer demand, and revenue generation.

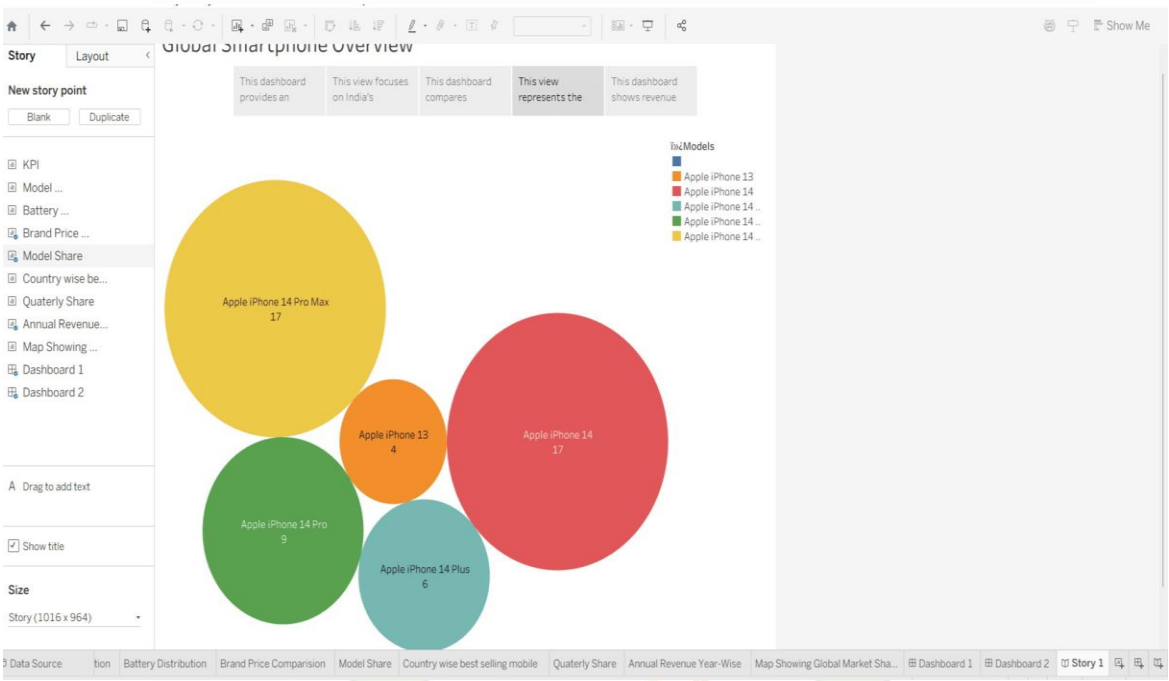
Story Point 4: Regional Performance Analysis

- State/region-wise distribution

Concept of Regional Performance

Regional performance refers to how effectively a company operates and generates results within specific geographic regions .

Screen:



Concept of Regional Performance

- Countries
- States or provinces
- Cities
- Sales territories

Story Point 5: Marfiet Share & Competitive Position

- Comparison with competitor brands
- Market share percentage analysis

3. Features Used in the Story

- Story points for structured navigation
- Interactive dashboards embedded in story
- Filters and highlights for dynamic analysis
- Clear titles and captions for explanations
