CHAPTER 9

Advantages and disadvantages

9.1 Advantages:

1. Clear Data Visualization

Using Tableau enables complex datasets to be presented through interactive dashboards, charts, heat maps, and trend lines. This makes insights easy to understand and visually appealing.

2. Better Market Understanding

The project helps identify:

- iPhone sales growth trends
- Market share changes over time
- Consumer demand patterns in India

This supports strategic business analysis.

3. Interactive & Dynamic Analysis

Tableau dashboards allow filtering by:

- Year
- Region
- Price segment
- Competitor brand

This improves user engagement and flexibility in analysis.

4. Data-Driven Decision Making

The project demonstrates how companies can use data analytics to:

- Identify growth opportunities
- Understand customer segments

5.Skill Development

The project enhances practical skills in:

- Data cleaning
- Data visualization
- Dashboard design

6.Real-World Relevance

Since Apple's growth in India is a current business trend, the project connects academic learning with real-world industry developments.

7.Identification of Premium Market Growth

The project highlights how Apple dominates the premium smartphone segment in India. This helps understand:

- Shifting consumer purchasing power
- Growth of aspirational buying

8.Competitive Bench-marking

The project allows comparison between Apple and competitors like Samsung,

Xioami and Vivo.

This helps in:

- Evaluating competitive strengths
- Understanding pricing strategies

9.Regional Business Insights

By analyzing state-wise or city-wise data, the project:

Identifies high-demand regions

- Shows urban vs rural adoption patterns
- Helps businesses target specific markets effectively
